Pinheiro and Bates 2000

Linear mixed effects

Analysis of covariance (pp. 30–41)

$$\text{LM} \quad y_{ij} = \beta_{0i} + \beta_1 x_{ij} + \epsilon_{ij} \quad \epsilon_{ij} \sim N(0, \sigma^2)$$

$$\text{LME} \quad y_{ij} = \beta_0 + b_i + \beta_1 x_{ij} + \epsilon_{ij} \quad b_i \sim N(0, \sigma_b^2)$$
$$\epsilon_{ij} \sim N(0, \sigma^2)$$

Nonlinear mixed effects

Logistic growth model (pp. 338–350 and 354–362)

$$y_{ij} = \frac{\phi_1}{1 + \exp[-(t_{ij} - \phi_2)/\phi_3]} + \varepsilon_{ij}$$

Generalized linear mixed effects

Poisson and negative binomial families
